### Objectives

The present project contributes to the automate of irrigation and fertigation both at the level of

Irrigation Boards and at the farm level providing integrated control tools applicable to the irrigation

delivery networks, fertigation distribution systems and irrigation machines.

In addition, the plan aims to provide guidelines and decision support systems for the modernization of water distribution systems.

Finally, such results and innovations will be physically available together with modern irrigation

systems in Acqua Campus. Here, demonstration and dissemination activities will take place to foster

the diffusion of progresses in efficient irrigation.

### Activities

Project's activities will be divided in three major parts. In the first, it will take place the development

of data-exchange protocols of the irrigation delivery network and fertigation banks. The second

activity will communicate the site-specific irrigation advice with the processing protocols of an

irrigation machine equipped with variable rate technology.

In the third activity, the new materials of the irrigation systems will be tested to propose the new

criteria of company irrigation efficiency.

A further activity will serve to promote the innovations produced, aggregating them in an exhibition

area that brings together all the most innovative irrigation technologies.
