Programme (Regional) - Calabria

Parole chiave

Animal husbandry and welfare

Waste, by-products and residues management

Farming practice

Food quality / processing and nutrition

Genetic resources

Project status

ongoing

Objectives

The Project has the general purpose of providing process and product innovations, immediately applicable, to the extensive breeding of the "Podolica" breed beef and the dairy sector of Calabria for the diversification of the production and offer of the meat and dairy products. It also pursues the aim of safeguarding, in the case of goats, animal biodiversity through actions to enhance the Rustica Calabrese ("Sciara") goat. In addition, from a supply chain perspective, the reintroduction of flax cultivation in the Calabrian territory is proposed to be used as a food supplement and to limit the growth of weeds.

Activities

- Implementation of a micro economy system to enhance the nutraceutical and organoleptic qualities of the meat obtained;
- Preservation of Podolica's biodiversity through the valorization of the meat;
- Conservation of "Podolica" biodiversity through meat enhancement;
- Diversification of production on dairy/meat farms;
- Safeguarding the indigenous goat "Rustica di Calabria" through the enhancement of productions;
- Demonstrate the herbicidal capabilities of flax;
- Create a potential market for both flax seeds and stems;
- Implementing an innovative cultivation method aimed at protecting

Introduzione di innovazione, derivante da ricerche e sperimentazioni già attuate o in corso, nei processi produttivi delle aziende agrozootecniche
