Project status

completed

### Objectives

The aim of the project is to develop innovative equipment capable of sustainably managing the waste water derived from phytotherapeutic applications contaminated with agrochemicals, through innovative high efficiency filtration processes. This system would allow to avoid the spillage of polluted waters and therefore the pollution of agricultural soils and surface waters, but specially the reuse of filtered water for subsequent applications. This practice will reduce waste and will allow manage the water resource in a sustainable way. This system therefore guarantees an improvement in the protection of water resources in agricultural environments and economic advantages for the farm.

### Activities

The activities are different:

1. Administrative and coordination activities;
2. Study and investigation of Agrobox needs;
3. Realization of Agrobox;
4. Validation of Agrobox;
5. Disclosure and communication of results

### Context

## Sistema innovativo per la gestione sostenibile delle acque contaminate da agrofarmaci e per la riduzione dell'inquinamento puntiforme in ambiente agrario

<https://www.innovarurale.it/pei-agri/gruppi-operativi/bancadati-go-pei/sistema-innovativo-la-gestione-sostenibile-delle-acque>

2/4

The innovation needs that underlie the project consist in the need to create a system capable of filtering waste water from phytoiatric applications for subsequent recovery and reuse. This will lead to a decrease in waste water disposal costs which today are to be considered special waste that the farm must dispose of

Pratice abstract

## Description

Administrative and coordination activities: establish a collaboration between the project partners and coordinate the activities

## Description

Agrobox study and needs survey.

Specific objective: to gather information on the need of the Agrobox system through a specific multidisciplinary study at several levels. Final analysis of the economic and environmental benefits brought by the system.

## Description

Realization of Agrobox Specific objective: to design and implement the Agrobox system for filtering contaminated water

## Description

Validation of Agrobox Specific objective: to verify the effectiveness of Agrobox functioning in relation to the results of the water analyzes.

## Description

Disclosure and communication of results

Specific objective: to spread the knowledge, functioning and prospects of the Agrobox system.
