How to feed the Farmbook?

User manual to upload knowledge objects.

AIM OF THE USER GUIDELINES

The overall aim of the User Guideline is:

- To explain to the **user** [i.e., people involved in Horizon 2020 MAPs like administrative personnel, farmers, foresters, advisors, researchers, policy makers, etc.] how to **upload** knowledge objects to the “FarmBook” with the help of the upload interface.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 862790.

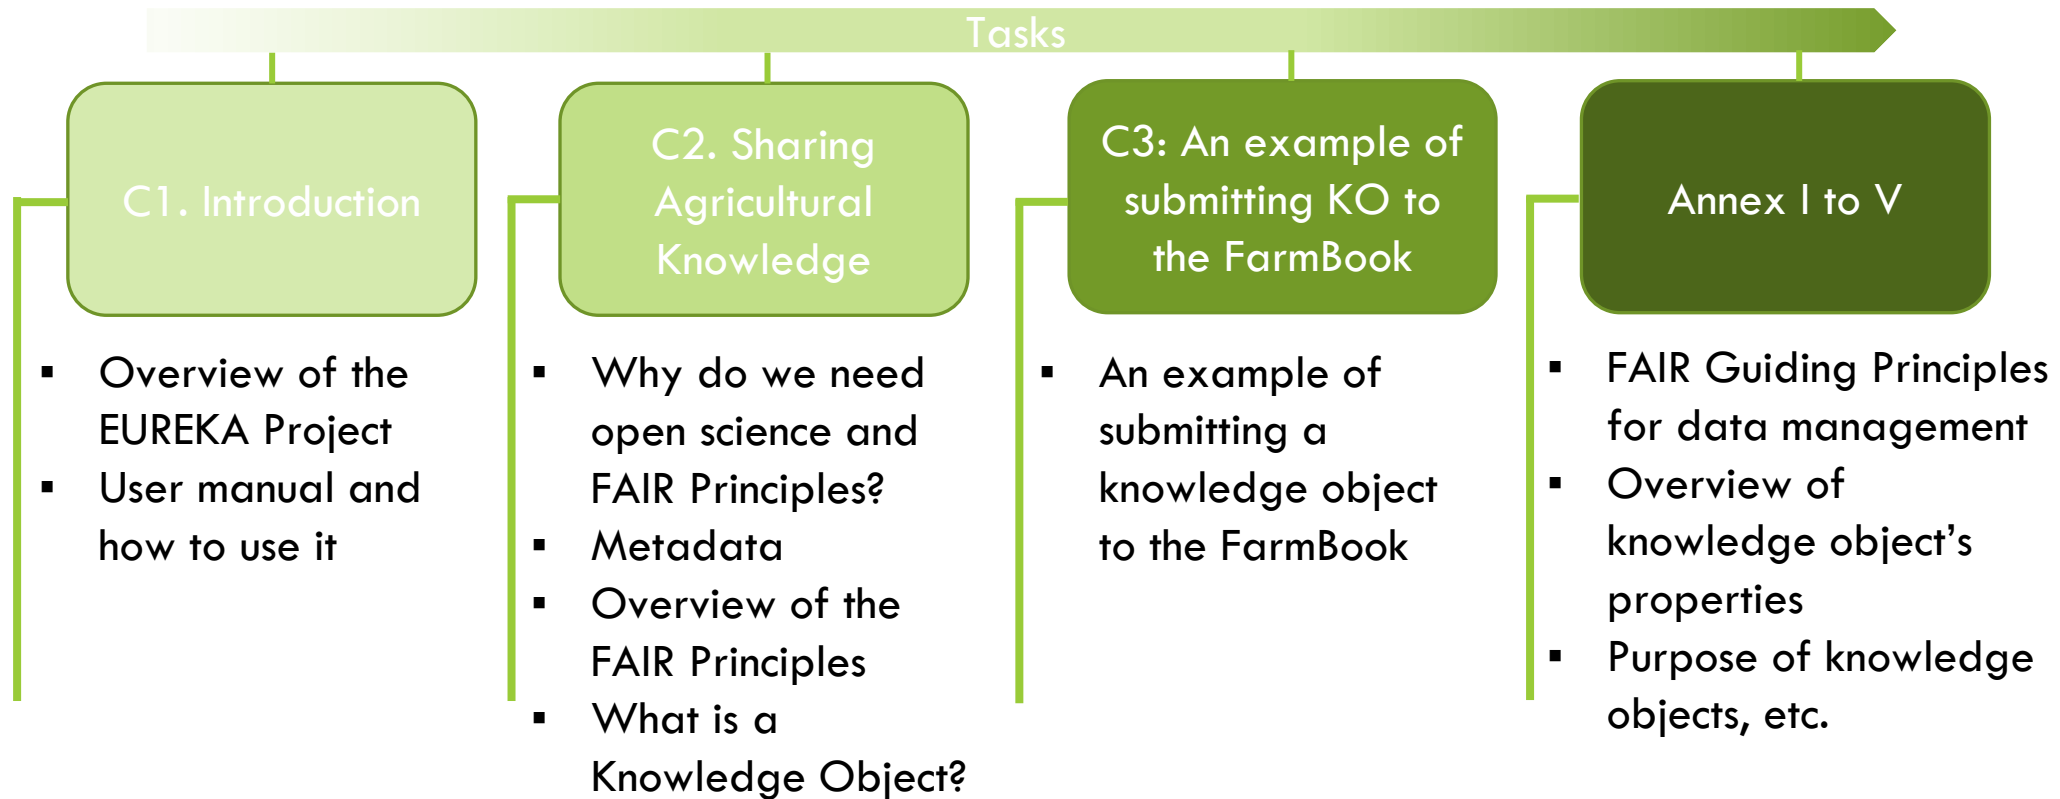

EUREKA

STRUCTURE OF THE EUREKA USER GUIDELINES

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 862790.

MAIN HIGHLIGHTS OF THE USER GUIDELINES

- Why is the sharing of knowledge objects important?[i.e., Open and FAIR Principles]?
- Rich metadata is the key
- Category of knowledge objects and preferred formats part of the KOs description with rich metadata

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 862790.

EUREKA

EXAMPLE OF METADATA

Metadata is the **information** about the knowledge objects. For example for a book:

- the title of the book,
- the name of the author(s),
- the name of the publisher, and
- the year in which the book was published

are metadata for the book (in other words, additional information describing the book).

Title: A Book about the Farmbook

Author: Christopher Brewster

Date of publication: 2021

URI: <https://www.somewhereontheinternet.com/paper>

→ Name of the book author

→ Title of the book

→ Name of the publisher and year of publication

These pieces of information about the book are all examples of **metadata**

Rule-based classification and mapping of ecosystem services with data on the integrity of forest ecosystems

By: Arimides, A.; Scholten, H.; et al. / Ecosystems, 2019, 22(1), 1-11

Abstract: The integrity of ecosystems is a key concept in ecosystem management. However, the concept remains to be defined and only few operational indicators and methods are available to assess ecosystem integrity. This paper presents a rule-based classification and mapping of ecosystem services with data on the integrity of forest ecosystems. The concept of ecosystem integrity is defined as the ability of an ecosystem to maintain its structure, function, and resilience over time. The concept is operationalized by a set of rules that are based on the following criteria: (1) the degree of disturbance, (2) the degree of fragmentation, (3) the degree of isolation, (4) the degree of connectivity, (5) the degree of heterogeneity, (6) the degree of complexity, (7) the degree of resilience, (8) the degree of sustainability, (9) the degree of adaptability, (10) the degree of transformability, (11) the degree of innovativeness, (12) the degree of diversity, (13) the degree of richness, (14) the degree of evenness, (15) the degree of dominance, (16) the degree of rarity, (17) the degree of endemism, (18) the degree of conservation, (19) the degree of protection, (20) the degree of management, (21) the degree of governance, (22) the degree of participation, (23) the degree of transparency, (24) the degree of accountability, (25) the degree of responsibility, (26) the degree of integrity, (27) the degree of honesty, (28) the degree of openness, (29) the degree of communication, (30) the degree of information, (31) the degree of knowledge, (32) the degree of understanding, (33) the degree of wisdom, (34) the degree of insight, (35) the degree of perception,
